

Aruba uses Kingston Technology hardware solutions to provide top level service to customers

A ten-year collaboration that supports the performance of Aruba Data Center solutions

London, 27 June 2019 – [Kingston Technology Europe Co LLP](#) – a world leader in technology solutions and storage products - after a long and fruitful collaboration, announces that Aruba - Italy's largest company for Data Center IT services, web hosting, e-mail, PEC and domain registration - uses Kingston storage solutions to offer customers a high level of service and operate increasingly efficiently.

To date, Aruba manages 2.6 million domains, 8.6 million email accounts, 6.1 million PEC accounts, 130,000 physical and virtual servers and a total of around 5 million customers in private, small and medium-sized businesses as well as public administrations and multinationals. Offering customers the best possible service is one of Aruba's primary objectives and in order to achieve this it must rely on a trusted and flexible storage solution manufacturer.

For over ten years Aruba has found both reliability and quality in Kingston; a partner able to support the performance of the company's Data Center services, offering experience and technical skills 24 hours a day, seven days a week. At Aruba Data Centers, Kingston, through its solutions, guarantees functionality, compatibility and scalability, thus allowing the company to respond to varying requests from customers with greater flexibility.

With Kingston's ability to provide hardware quickly, coupled with efficiency in responding accurately to questions on optimising hardware solutions, Aruba works closely with Kingston to continuously improve customer service.

"We are proud of our collaboration with Aruba. We have worked closely together for all these years guaranteeing them our reliability and our legendary technical support", said Stefania Prando, Business Development Manager and Team Leader of Kingston Technology Italy. "We will continue to work and strive to ensure that Aruba continues to offer the best hosting and mailing services to its growing user base."

"Our goal is to continue to expand and increase our services. Kingston supports us by providing reliable and quality memories, which use a hardware architecture that leading manufacturers (OEMs) continue to develop and market," said Diego Parasecoli, Manager of the Technical Operations division of Aruba" which is why, the collaboration has been going on for over a decade and the solutions they provide continue to prove effective".

Aruba uses Kingston Technology in their proprietary Data Centers (two in Arezzo, one near Milan and one in the Czech Republic) and in partner structures distributed in Europe (France, England, Germany and Poland).

In the future, due to Aruba's expansion project to create a new Data Center in Rome – the Hyper Cloud Data Center - there will be ample opportunity to enhance our collaboration for supplying Kingston solutions. This will not only improve Aruba's services but also optimise their existing hardware infrastructure.

Aruba S.p.A.

Aruba SpA, founded in 1994, is the first company in Italy for Data Center, cloud, web hosting, e-mail, PEC and domain registration services and has extensive experience in the creation and management of Data Centers, having a network active at European level: in addition to proprietary Data Centers - 3 already active in Italy and one arriving by 2020, plus another in the Czech Republic - additional partner structures are in France, Germany, UK and Poland. The company manages over 2.6 million domains, more than 8.6 million email accounts, over 6 million PEC accounts, over 130,000 servers and a total of 5 million customers. It is active on the main European markets such as France, England and Germany and boasts leadership in the Czech and Slovak Republics and a consolidated presence in Poland and Hungary. In addition to web hosting services, it also provides dedicated server services, housing and colocation, managed services, digital signatures, substitutive conservation and smart-card production. Since 2011 it has expanded its offer with Cloud services and in 2014 it became the official Register of the prestigious "cloud" extension. Aruba Data Centers can host over 200,000 servers.
